

## Portable EV Car Charger with Digital Display Adjustable Current and Safety Certifications for Durable Charging Solutions

### Our Product Introduction

#### Basic Information

- Brand Name: TIANJIN TOEC HUADIAN TECHNOLOGY CO., LTD
- Model Number: HD-SY2-16S

#### Product Specification

- Output Power: 11kw
- Input Voltage: 110/480V
- Rated Current: 16-50A
- Rated Voltage: 110-480V
- Rated Power: 3.6-22KW
- Temperature: -40 To +55
- Highlight: portable EV car charger with digital display,  
adjustable current EV car charger,  
durable EV charger with safety certifications

## Product Description

We usually export large quantities to foreign countries. Hope to find more trade partners.

### More Than a Charger—A Complete Solution Without Compromise

In a market flooded with “budget” EV chargers that cut corners on safety, durability, and features, this portable unit stands apart by delivering premium performance at a fair price—without hidden compromises.

Many competitors offer bare-bones models: no display, no adjustable current, no safety certifications, and flimsy construction that fails after a few months. But this charger believes you deserve better. That's why it includes features others reserve for high-end models: a full-function digital screen, eight-level current adjustment, reservation timing, real-time energy monitoring, and industrial-grade safety systems—all in one compact device.

It doesn't just meet standards—it exceeds them. The unit is rigorously tested to comply with international safety protocols, including CE, RoHS, and equivalent electrical safety certifications. Its internal components are rated for 10,000+ insertion cycles, far outlasting cheaper alternatives that wear out after a year of regular use.

Plus, unlike generic chargers with fixed 16A output, this model gives you true versatility: use it on a standard 10A household outlet for slow overnight charging, or connect it to a dedicated 32A circuit for rapid top-ups. The same unit adapts to your lifestyle—not the other way around.

And it comes backed by a full 2-year warranty and responsive customer support. When you choose this charger, you're not just getting hardware—you're joining a community that values quality, transparency, and long-term value.

Don't settle for “good enough.” Choose a charger that grows with you, protects your investment, and delivers exceptional performance every single day.

## Pre-scheduled timed charging

The control box supports scheduled charging settings for start times, allowing timed entry into charging mode for convenient and worry-free night charging.

8:00 9:00 10:00

Daytime peak rates are more expensive

Nighttime off-peak rates are cheaper

22:00 00:00 8:00

## Home ev charger station

- Factory Competitive price, supporting ODM/OEM
- Focus on AC Home Ev Charger
- Support Type 2, Type 1, GB/T, Tesla
- Complete certifications, Safety and reliability
